HD VIDEO CAPTURE CARD

The **Osprey-700 HD video card** captures SDI audio/video at any standard-definition (SD) or high-definition (HD) resolution, automatically adapting to any standard format. Utilizing the latest PCI-Express (PCIe) x1 PC bus for optimum performance, it's available with pre-enabled Osprey SimulStream, which allows multiple output streams in any format from a single video source. Designed specifically for live capture and streaming, this card will automatically adapt to any standard ATSC SD or HD signal format on the fly. Other features include Advanced De-interlace; Spatial Down-sampling; RGB and YUV Format Conversion; Cropping and Scaling; Contrast, Brightness, Hue, and Gamma leveling; Automatic Inverse Telecine Processing; and Dynamic Logo Insertion, Sizing and Positioning. The card also can extract and deliver VBI (Vertical Blanking Interval) data for closed captioning. This card accepts SD- and HD-SDI video with up to eight embedded stereo audio pairs. All SD and HD resolutions up to 1080i (at 60/59.94/50 Hz) are supported, and it comes with drivers for Windows XP, Server 2003 (beta) and Vista (beta). List Price: \$3,495. **Contact:** ViewCast Corp., (972) 488-7200, www.viewcast.com.
